Professional Summary

Generative AI and Backend Developer with 1.5+ years of experience building LLM-powered applications, RAG pipelines, real-time streaming APIs, and AI-driven automation systems. Skilled in Python, FastAPI, Groq LLaMA 3.3, OpenAI APIs, LangChain, vector databases, and structured data extraction. Experienced in designing scalable backend services and deploying enterprise-grade AI solutions.

Technical Skills

Programming: Python, Node.js

Generative AI: LLMs, Prompt Engineering, RAG, LangChain, LlamaIndex, System Personas

LLM APIs: Groq LLaMA 3.3, OpenAI APIs

Vector Databases: ChromaDB, Pinecone

Backend Development: FastAPI, Async REST APIs, SSE Streaming

Machine Learning: Data Science, Model Development

Data Validation: Pydantic, JSON Schema

Databases: MySQL, MongoDB

Tools: Git, Docker

Professional Experience

Generative AI & Backend Developer

2024 – Present

Capgemini / AI & Software Engineering

- Architected and deployed enterprise-grade LLM pipelines using Python, FastAPI, and Groq LLaMA 3.3.
- Built Retrieval-Augmented Generation (RAG) systems for semantic document search and intelligent question answering.
- Developed real-time streaming AI endpoints using Server-Sent Events (SSE) for responsive user experiences.
- Engineered structured data extraction pipelines using Pydantic and JSON schema validation.
- Automated candidate-interaction workflows using conversational AI avatars and resume-based question answering systems.
- Containerized and deployed backend services using Docker-based environments.

Projects

HireMe AI – Interactive Candidate AI Avatar & Resume Parser

- Developed an AI-powered candidate assistant using FastAPI, Groq LLaMA 3.3, and Pydantic.
- Implemented real-time streaming responses and resume-based conversational question answering.
- Designed structured JSON outputs for reliable AI interactions.

Enterprise RAG Document Q&A Pipeline

- Built a multi-document semantic search platform using vector embeddings and retrieval pipelines.
- Integrated citation-aware responses and contextual document retrieval.
- Utilized ChromaDB/Pinecone for efficient similarity search.

Second Hand Car Price Prediction

- Developed a machine learning regression model for vehicle price estimation.
- Applied feature engineering, preprocessing pipelines, and model evaluation techniques.

Book Recommender System

- Implemented collaborative filtering algorithms to generate personalized recommendations.
- Built recommendation workflows using machine learning techniques.

Education

B.E. Artificial Intelligence & Data Science	
Dr. D. Y. Patil Institute of Technology	2020 – 2024
Higher Secondary Certificate (HSC)	
La.Na. Hoshing College, Jamkhed	2020
Secondary School Certificate (SSC)	
Shri Nagesh Vidyalaya, Jamkhed	2018

Certifications

- Generative AI & LLM Application Engineering
- Full Stack Web Development – Aptech Center (Work With Dignity NGO)
